# Common Service Desk Issues with Solution Troubleshooting Guide

## 1. Account & Access Issues

### 1.1 Password Reset

**Issue**: User forgot password
**Solution**:

1. Verify user identity (ask security questions/verify employee ID)
2. Open Active Directory Users and Computers
3. Right-click user → Reset Password
4. Set temporary password with "User must change password at next logon"
5. Provide temp password via secure method
6. Confirm successful password change

### 1.2 Account Locked Out

**Issue**: Account locked due to failed attempts
**Solution**:

1. Open Active Directory
2. Right-click user → Properties → Account tab
3. Uncheck "Account is locked out"
4. Check Event Viewer for lockout source (Security logs, event ID 4740)
5. Educate user about proper credentials

### 1.3 VPN Connection Failed

**Issue**: Can't establish VPN connection
**Solution**:

1. Verify internet connectivity
2. Check VPN server status
3. Validate username/password
4. Restart VPN client service
5. Reinstall VPN client if needed
6. Verify firewall isn't blocking VPN ports

### 1.4 MFA Not Working

**Issue**: Can't receive authentication code
**Solution**:

1. Check mobile device has signal
2. Try alternate MFA method (SMS/email/backup codes)
3. Reset MFA configuration in Azure AD
4. Reconfigure authenticator app
5. Check conditional access policies

### 1.5 BitLocker Recovery

**Issue**: Locked out of encrypted drive
**Solution**:

1. Retrieve recovery key from:
    - Microsoft account (personal devices)
    - Azure AD (work devices)
    - Printed recovery sheet
2. Enter 48-digit recovery key
3. Suspend/resume BitLocker if needed

### 1.6 AD Login Failure

**Issue**: "Invalid username/password"
**Solution**:

1. Verify correct domain (e.g., CORP\username)
2. Check Caps Lock/Num Lock status
3. Reset password in AD if needed
4. Verify account isn't disabled
5. Check account expiration date

### 1.7 Email Account Locked

**Issue**: Can't access Exchange mailbox
**Solution**:

1. Open Exchange Admin Center
2. Navigate to Recipients → Mailboxes
3. Select user → Manage mailbox delegation
4. Unlock mailbox if locked
5. Check for litigation hold

### 1.8 Shared Drive Access Denied

**Issue**: "Access denied" error
**Solution**:

1. Right-click folder → Properties → Security
2. Click Advanced → Effective Access
3. Add user to appropriate AD group
4. Grant NTFS permissions:
    - Read
    - Modify
    - Full Control

### 1.9 Corrupt User Profile

**Issue**: Windows profile won't load
**Solution**:

1. Boot to Safe Mode
2. Create new admin account
3. Copy data from old profile (C:\Users\OldProfile)
4. Delete corrupted profile:
    - System Properties → Advanced → User Profiles
5. Recreate profile

### 1.10 Citrix Session Issues

**Issue**: Frequent disconnects
**Solution**:

1. Clear Citrix client cache
2. Update Citrix Workspace app
3. Check network latency
4. Adjust session timeout settings
5. Verify SSL certificates

### 1.11 Expired Password

**Issue**: Password expired message
**Solution**:

1. Guide user to CTRL+ALT+DEL → Change Password
2. If domain-joined, connect to VPN first
3. Ensure new password meets complexity:
    - 8+ chars
    - Upper/lower case
    - Numbers/symbols

### 1.12 Disabled Account

**Issue**: Account disabled message
**Solution**:

1. Verify in Active Directory
2. Check termination date
3. Re-enable if accidental
4. Submit HR ticket if intentional

### 1.13 OWA Access Issues

**Issue**: Can't access Outlook Web App
**Solution**:

1. Verify correct URL (outlook.office.com)
2. Check browser compatibility

3. Clear browser cache
4. Test in private browsing mode
5. Verify license assigned

**1.14 Office License Missing**

**Issue**: "Product Unlicensed" error
**Solution**:

1. Open Microsoft 365 Admin Center
2. Navigate to Users → Active Users
3. Check license assignment
4. Reassign Office 365 license
5. Run Office Repair tool

**1.15 Distribution Group Issues**

**Issue**: Emails not reaching group
**Solution**:

1. Check Exchange Admin Center
2. Verify group membership
3. Check moderation settings
4. Review message size limits
5. Test with internal sender

**1.16 Calendar Permissions**

**Issue**: Can't see colleague's calendar
**Solution**:

1. Open Outlook
2. Right-click calendar → Properties → Permissions
3. Set appropriate level:
    - Reviewer (read-only)
    - Editor (full access)
4. Verify in OWA

### 1.17 Automatic Replies Not Working

**Issue**: Out of Office not responding
**Solution**:

1. Check Exchange Online rules
2. Verify time range settings
3. Test with external email
4. Disable/re-enable rule
5. Check mailbox size limits

### 1.18 SaaS App Access Denied

**Issue**: Can't access cloud app
**Solution**:

1. Verify SSO configuration
2. Check user provisioning
3. Review conditional access policies
4. Test direct login (if bypassing SSO)
5. Check license assignment

### 1.19 Smart Card Login Failure

**Issue**: Smart card rejected
**Solution**:

1. Reinsert card
2. Check certificate validity
3. Verify reader drivers
4. Test with different card
5. Check PKI infrastructure

### 1.20 BI Tool Access Issues

**Issue**: Can't access reports
**Solution**:

1. Verify dataset permissions
2. Check gateway connection

3. Refresh credentials
4. Test with different browser
5. Check service health

**1.21 Timeclock System Login Fail**

**Issue**: Can't punch in/out
**Solution**:

1. Verify AD sync status
2. Reset credentials in time system
3. Check browser requirements
4. Verify system availability
5. Test with mobile app

**1.22 VPN Split Tunneling Issues**

**Issue**: Some resources unavailable
**Solution**:

1. Check VPN client configuration
2. Verify route tables
3. Test with full tunnel
4. Review firewall rules
5. Check DNS settings

**1.23 Privileged Access Requests**

**Issue**: Need admin rights
**Solution**:

1. Submit ticketed request
2. Specify justification
3. Set expiration timeframe
4. Use PAM solution if available
5. Log all privileged access

### 1.24 Service Account Locked

**Issue**: Scheduled tasks failing
**Solution**:

1. Unlock in Active Directory
2. Check task scheduler
3. Verify password expiration
4. Convert to gMSA if possible
5. Document dependencies

### 1.25 Federated Auth Failure

**Issue**: SSO not working
**Solution**:

1. Check IDP connectivity
2. Verify certificate validity
3. Test with local account
4. Review SAML logs
5. Check claim rules

### 1.26 Password Change Blocked

**Issue**: Can't change password
**Solution**:

1. Verify password policy
2. Check minimum password age
3. Test with CTRL+ALT+DEL
4. Check domain connectivity
5. Reset via admin tool

### 1.27 Terminated User Access

**Issue**: Offboarding incomplete
**Solution**:

1. Disable all sign-in methods
2. Revoke active sessions

3. Forward emails if needed
4. Document asset recovery
5. Complete HR checklist

**1.28 Guest Account Expired**

**Issue**: External collaborator locked out
**Solution**:

1. Extend in Azure AD
2. Verify invitation status
3. Check access reviews
4. Set new expiration
5. Monitor usage

**1.29 Dynamic Group Issues**

**Issue**: Membership not updating
**Solution**:

1. Force Azure AD sync
2. Verify query syntax
3. Check attribute values
4. Test with manual add
5. Review sync intervals

**1.30 Conditional Access Block**

**Issue**: Legitimate login blocked
**Solution**:

1. Review sign-in logs
2. Check CA policies
3. Verify device compliance
4. Create exclusion if needed
5. Monitor future attempts

## 2. Hardware Issues

### 2.1 Laptop Won't Power On

**Solution**:

1. Check power adapter LED
2. Remove battery, hold power 30 sec
3. Try known-good charger
4. Test power outlet
5. Check for motherboard damage

### 2.2 Printer Paper Jam

**Solution**:

1. Power off printer and Open all access panels
2. Remove paper (follow direction arrows)
3. Check for torn pieces
4. Reset and retry

### 2.3 Monitor No Signal

**Solution**:

1. Verify power/video cables
2. Try different port
3. Test alternate monitor
4. Update graphics drivers
5. Check BIOS settings

### 2.4 Keyboard Not Working

**Solution**:

1. Reconnect USB/PS2
2. Try different port
3. Test alternate keyboard
4. Check Device Manager
5. Update chipset drivers

### 2.5 Mouse Freezing

**Solution**:

1. Replace batteries
2. Reconnect receiver
3. Clean optical sensor
4. Update drivers
5. Test different surface

### 2.6 External Drive Not Detected

**Solution**:

1. Try different USB port
2. Check Disk Management
3. Test on another PC
4. Update USB drivers
5. Check for physical damage

### 2.7 Docking Station Issues

**Solution**:

1. Reconnect all cables
2. Update firmware
3. Test different dock
4. Check power supply
5. Verify compatibility

### 2.8 Laptop Overheating

**Solution**:

1. Clean vents with compressed air
2. Check Task Manager for load
3. Replace thermal paste
4. Use cooling pad
5. Adjust power settings

### 2.9 No Audio Output

**Solution**:

1. Check volume/mute
2. Verify playback device
3. Update audio drivers
4. Test headphones
5. Run audio troubleshooter

### 2.10 Webcam Not Working

**Solution**:

1. Check privacy settings
2. Update drivers
3. Test in different app
4. Verify in Device Manager
5. Check for physical switch

### 2.11 Touchpad Issues

**Solution**:

1. Check for disable shortcut (Fn key)
2. Update drivers
3. Adjust sensitivity
4. Clean surface
5. Verify in BIOS

### 2.12 Flickering Display

**Solution**:

1. Adjust refresh rate
2. Update graphics drivers
3. Try different cable
4. Check for interference
5. Test external monitor

### 2.13 Broken Laptop Hinge

**Solution**:

1. Document damage
2. Order replacement parts
3. Backup data immediately
4. Use external monitor
5. Submit repair ticket

### 2.14 Missing Keyboard Keys

**Solution**:

1. Check for debris
2. Reattach key if possible
3. Order replacement
4. Use external keyboard
5. Submit hardware ticket

### 2.15 Faulty Charger

**Solution**:

1. Test with known-good charger
2. Check for bent pins
3. Inspect cable for damage
4. Measure voltage output
5. Order replacement

### 2.16 USB Ports Not Working

**Solution**:

1. Try different device
2. Check BIOS settings
3. Update chipset drivers
4. Inspect for physical damage
5. Test with bootable USB

### 2.17 Desktop Won't POST

**Solution**:

1. Reseat RAM modules
2. Check PSU connections
3. Clear CMOS
4. Test with minimal hardware
5. Check for beep codes

### 2.18 Printer Not Recognized

**Solution**:

1. Reinstall drivers
2. Check USB/WiFi connection
3. Restart print spooler
4. Test different PC
5. Verify compatibility

### 2.19 Scanner Not Working

**Solution**:

1. Check WIA/TWAIN settings
2. Update drivers
3. Test scanning software
4. Verify power
5. Clean glass surface

### 2.20 Battery Not Charging

**Solution**:

1. Calibrate battery
2. Check power settings
3. Update BIOS
4. Test with different charger
5. Monitor wear level

### 2.21 Faulty Network Card

**Solution**:

1. Update NIC drivers
2. Check link lights
3. Test with USB Ethernet
4. Verify router port
5. Replace if needed

### 2.22 Bluetooth Pairing Issues

**Solution**:

1. Remove device and re-pair
2. Update Bluetooth drivers
3. Check for interference
4. Verify device compatibility
5. Restart Bluetooth service

### 2.23 Optical Drive Missing

**Solution**:

1. Check Device Manager
2. Update drivers
3. Verify BIOS detection
4. Test with bootable disc
5. Replace if needed

### 2.24 Dual Monitor Problems

**Solution**:

1. Win+P to check projection
2. Update graphics drivers
3. Verify cable connections
4. Adjust display settings
5. Check GPU capabilities

### 2.25 Fingerprint Login Failing

**Solution**:

1. Re-enroll fingerprints
2. Clean sensor
3. Update biometric drivers
4. Check Windows Hello settings
5. Test alternate login

### 2.26 Loud Fan Noise

**Solution**:

1. Clean dust buildup
2. Check CPU usage
3. Adjust fan curves
4. Replace if bearings failing
5. Monitor temperatures

### 2.27 Broken Power Button

**Solution**:

1. Use keyboard wake (if enabled)
2. Check BIOS power settings
3. Short pins temporarily
4. Order replacement part
5. Submit repair ticket

### 2.28 Headset Mic Not Working

**Solution**:

1. Check audio input settings
2. Test with different app
3. Verify combo jack support
4. Update audio drivers
5. Try USB headset

### 2.29 Kensington Lock Stuck

**Solution**:

1. Use emergency key
2. Lubricate mechanism
3. Check for debris
4. Document asset tag
5. Order replacement

### 2.30 BIOS Password Locked

**Solution**:

1. Clear CMOS (remove battery)
2. Check manufacturer backdoor
3. Use password reset service
4. Replace motherboard if needed
5. Document for future

---

## 3. Software Issues

### 3.1 Outlook Crashes

**Solution**:

1. Launch in safe mode: outlook /safe
2. Disable add-ins
3. Repair PST with SCANPST.EXE
4. Create new profile
5. Repair Office installation

### 3.2 Excel File Corruption

**Solution**:

1. Use Open and Repair
2. Import to new workbook
3. Use third-party recovery tools

4. Restore from backup
5. Check auto-recover files

**3.3 Word Won't Save**

**Solution**:

1. Save to different location
2. Check disk space
3. Disable antivirus temporarily
4. Repair Office
5. Check file permissions

**3.4 Teams Audio Issues**

**Solution**:

1. Test in Teams settings
2. Check Windows sound settings
3. Update audio drivers
4. Reset Teams cache
5. Reinstall Teams

**3.5 Adobe Acrobat Errors**

**Solution**:

1. Update to latest version
2. Reset preferences
3. Disable protected mode
4. Use Adobe Cleaner Tool
5. Reinstall

**3.6 QuickBooks Error 6000**

**Solution**:

1. Run QuickBooks File Doctor
2. Restore from backup
3. Verify file permissions

4. Reinstall QuickBooks
5. Check company file

**3.7 AutoCAD Freezing**

**Solution**:

1. Disable hardware acceleration
2. Update graphics drivers
3. Reset configuration
4. Clean install
5. Check system requirements

**3.8 SAP GUI Login Failure**

**Solution**:

1. Verify credentials
2. Check server connection
3. Reinstall SAP GUI
4. Verify Java version
5. Check firewall rules

**3.9 Zoom Connection Issues**

**Solution**:

1. Test internet speed
2. Update Zoom client
3. Disable VPN temporarily
4. Check firewall settings
5. Reinstall

**3.10 Project Won't Open**

**Solution**:

1. Verify Project Server status
2. Check file associations
3. Repair Office installation

4. Restore from backup
5. Import to new project

**3.11 Visio Shapes Missing**

**Solution**:

1. Reinstall stencils
2. Check template location
3. Reset Visio settings
4. Repair Office
5. Download from official source

**3.12 Access DB Corruption**

**Solution**:

1. Use compact/repair
2. Import to new DB
3. Restore from backup
4. Check for VBA errors
5. Verify ODBC connections

**3.13 OneNote Sync Issues**

**Solution**:

1. Recreate notebook
2. Check OneDrive status
3. Reset OneNote cache
4. Verify permissions
5. Export important sections

**3.14 Publisher Won't Print**

**Solution**:

1. Export to PDF first
2. Update printer drivers
3. Check page setup

4. Repair Office
5. Test different printer

**3.15 Edge Crashes**

**Solution**:

1. Clear browsing data
2. Disable extensions
3. Reset Edge settings
4. Update Windows
5. Create new profile

**3.16 Chrome Running Slow**

**Solution**:

1. Disable extensions
2. Clear cache/cookies
3. Reset Chrome settings
4. Update Chrome
5. Check for malware

**3.17 Firefox Won't Load Pages**

**Solution**:

1. Reset network settings
2. Disable IPv6
3. Clear DNS cache
4. Update Firefox
5. Refresh Firefox

**3.18 Java App Not Running**

**Solution**:

1. Update JRE
2. Check Java console
3. Verify PATH variables

4. Adjust security settings
5. Test with different browser

**3.19 Silverlight Issues**

**Solution**:

1. Use alternate browser
2. Reinstall Silverlight
3. Check compatibility mode
4. Enable in browser
5. Contact vendor for HTML5 alternative

**3.20 .NET Framework Error**

**Solution**:

1. Run .NET Repair Tool
2. Reinstall .NET
3. Check Windows updates
4. Verify application requirements
5. Enable in Windows Features

**3.21 Missing DLL Files**

**Solution**:

1. Run SFC /scannow
2. Reinstall affected app
3. Download from official source
4. Check system restore
5. Update Windows

**3.22 Blue Screen (BSOD)**

**Solution**:

1. Note error code
2. Boot to safe mode
3. Update drivers

4. Run memory diagnostics
5. Check minidump files

**3.23 Windows Update Stuck**

**Solution**:

1. Stop Windows Update service
2. Delete SoftwareDistribution folder
3. Restart service
4. Run troubleshooter
5. Manual update

**3.24 Program Won't Uninstall**

**Solution**:

1. Use Revo Uninstaller
2. Manual registry cleanup
3. Boot to safe mode
4. Check for leftover files
5. Reinstall then uninstall

**3.25 Missing Start Menu**

**Solution**:

1. Restart explorer.exe
2. Run DISM repair
3. Create new user profile
4. Check Group Policy
5. Reinstall Start Menu

**3.26 Taskbar Disappeared**

**Solution**:

1. Win+T to unhide
2. Restart explorer.exe
3. Check display settings

4. Update graphics drivers
5. System restore

**3.27 Desktop Icons Missing**

**Solution**:

1. Right-click desktop → View → Show icons
2. Check screen resolution
3. Restore from backup
4. Recreate shortcuts
5. Check profile corruption

**3.28 Wrong File Associations**

**Solution**:

1. Right-click → Open With
2. Set default programs
3. Edit registry if needed
4. Reinstall affected app
5. Run DISM repair

**3.29 Right-Click Not Working**

**Solution**:

1. Restart File Explorer
2. Check for malware
3. Rebuild shell cache
4. System restore
5. Create new profile

**3.30 Constant UAC Prompts**

**Solution**:

1. Adjust UAC slider
2. Check for malware
3. Verify admin rights

4. Review scheduled tasks
5. Check Group Policy

**3.31 Windows Activation Issues**

**Solution**:

1. Run slmgr /rearm
2. Enter valid product key
3. Contact Microsoft
4. Check BIOS SLIC
5. Reinstall if needed

**3.32 Print Spooler Stuck**

**Solution**:

1. Restart print spooler service
2. Clear print queue
3. Delete corrupted jobs
4. Reinstall printer
5. Check for Windows updates

**3.33 Fonts Not Appearing**

**Solution**:

1. Clear font cache
2. Reinstall fonts
3. Check permissions
4. Verify embedding rights
5. System restore

**3.34 Clipboard Not Working**

**Solution**:

1. Restart rdpclip.exe
2. Check for conflicting apps
3. Update Windows

4. Remote Desktop specific fixes
5. Check Group Policy

**3.35 Sticky Keys Enabled**

**Solution**:

1. Disable in Ease of Access
2. Press Shift 5 times to toggle
3. Check registry settings
4. Clean keyboard
5. Update drivers

**3.36 Search Not Working**

**Solution**:

1. Rebuild index
2. Restart Windows Search
3. Run DISM repair
4. Check for corruption
5. Create new profile

**3.37 Dark Mode Broken**

**Solution**:

1. Toggle registry setting
2. Update graphics drivers
3. Check for app compatibility
4. Reinstall theme
5. System restore

**3.38 Missing Admin Rights**

**Solution**:

1. Request elevation
2. Verify in Local Users/Groups
3. Check Group Policy

4. Run as administrator
5. Contact IT support

**3.39 BSOD on Startup**

**Solution**:

1. Boot to safe mode
2. Uninstall recent updates
3. Roll back drivers
4. Run memory diagnostics
5. Repair installation

**3.40 Application Compatibility**

**Solution**:

1. Run compatibility troubleshooter
2. Set compatibility mode
3. Check for patches
4. Virtualize if needed
5. Contact vendor

---

## 4. Network Issues

**4.1 WiFi Connected No Internet**

**Solution**:

1. ipconfig /release, ipconfig /renew
2. ipconfig /flushdns
3. Check proxy settings
4. Reset TCP/IP stack
5. Update drivers

### 4.2 Ethernet Not Working

**Solution**:

1. Check link lights
2. Try different cable
3. Update NIC drivers
4. Disable/enable adapter
5. Check duplex settings

### 4.3 Slow Network Speeds

**Solution**:

1. Run speed test
2. Check for throttling
3. Scan for malware
4. Verify switch ports
5. Check QoS policies

### 4.4 Can't Connect to VPN

**Solution**:

1. Verify credentials
2. Check firewall settings
3. Reinstall VPN client
4. Verify routing
5. Check for conflicts

### 4.5 IP Conflict Detected

**Solution**:

1. Release/renew IP
2. Check DHCP scope
3. Set static IP if needed
4. Scan for rogue devices
5. Document assignments

### 4.6 DNS Server Not Responding

**Solution**:

1. Use alternate DNS (8.8.8.8)
2. Flush DNS cache
3. Restart DNS client
4. Check firewall rules
5. Verify NIC settings

### 4.7 Remote Desktop Failed

**Solution**:

1. Check firewall settings
2. Verify RDP enabled
3. Use mstsc /admin
4. Check licensing
5. Verify network level auth

### 4.8 Network Printer Offline

**Solution**:

1. Restart printer
2. Re-add printer
3. Verify IP address
4. Check driver
5. Test from another PC

### 4.9 WiFi Keeps Dropping

**Solution**:

1. Update drivers
2. Change channel
3. Move closer to AP
4. Check for interference
5. Replace adapter

### 4.10 No Internet After Update

**Solution**:

1. Roll back update
2. Reset TCP/IP
3. Check drivers
4. Disable IPv6
5. System restore

### 4.11 Limited Connectivity

**Solution**:

1. Restart router
2. Check DHCP
3. Verify default gateway
4. Test with static IP
5. Check VLAN tagging

### 4.12 Can't Access NAS

**Solution**:

1. Verify permissions
2. Check network path
3. Test with IP vs hostname
4. Update firmware
5. Check SMB/NFS versions

### 4.13 VoIP Call Quality Issues

**Solution**:

1. Check QoS settings
2. Test network latency
3. Update firmware
4. Verify bandwidth
5. Check for packet loss

### 4.14 Port Forwarding Not Working

**Solution**:

1. Verify external IP
2. Check firewall rules
3. Test internally first
4. Verify service running
5. Check NAT settings

### 4.15 Network Drive Mapping Failed

**Solution**:

1. Verify UNC path
2. Check permissions
3. Use IP address
4. Update credentials
5. Check DNS resolution

### 4.16 SSL Certificate Errors

**Solution**:

1. Verify date/time
2. Install root cert
3. Check revocation
4. Export/import cert
5. Contact CA

### 4.17 RADIUS Auth Failure

**Solution**:

1. Verify shared secret
2. Check NAS configuration
3. Test with local account
4. Verify network access
5. Check logs

### 4.18 802.1X Issues

**Solution**:

1. Verify certificates
2. Check supplicant config
3. Test with wired connection
4. Update firmware
5. Check switch config

### 4.19 Network Scan Failing

**Solution**:

1. Verify IP range
2. Check firewall rules
3. Use different tool
4. Test with ping sweep
5. Check ICMP settings

### 4.20 Slow File Transfers

**Solution**:

1. Check duplex settings
2. Test with different protocol
3. Verify storage performance
4. Check for network storms
5. Update NIC drivers

### 4.21 Multicast Not Working

**Solution**:

1. Verify IGMP snooping
2. Check switch config
3. Test with different VLAN
4. Verify application
5. Check firewall

### 4.22 VLAN Issues

**Solution**:

1. Verify tagging
2. Check trunk ports
3. Test with access port
4. Verify native VLAN
5. Check routing

### 4.23 Spanning Tree Problems

**Solution**:

1. Check root bridge
2. Verify port states
3. Adjust timers
4. Check for loops
5. Update firmware

### 4.24 OSPF Neighbor Down

**Solution**:

1. Verify network statements
2. Check area IDs
3. Verify hello/dead timers
4. Check authentication
5. Verify interfaces

### 4.25 BGP Peering Issues

**Solution**:

1. Verify AS numbers
2. Check prefix lists
3. Verify MD5 auth
4. Check route maps
5. Verify TCP 179

## 5. Security Issues

### 5.1 Ransomware Detected

**Solution**:

1. Isolate immediately
2. Scan with Malwarebytes
3. Restore from backup
4. Reset all credentials
5. Patch vulnerabilities

### 5.2 Phishing Email Reported

**Solution**:

1. Quarantine email
2. Report to security team
3. Train user
4. Block sender/domain
5. Check for compromises

### 5.3 File Access Denied

**Solution**:

1. Verify permissions and Check share/NTFS
2. Grant access
3. Check inheritance
4. Document changes

### 5.4 Antivirus Blocking App

**Solution**:

1. Add to exclusions
2. Report false positive
3. Verify file hash
4. Submit to vendor
5. Temporary disable

### 5.5 Unauthorized Logins

**Solution**:

1. Lock account
2. Investigate logs
3. Enable MFA
4. Check for breaches
5. Reset credentials

### 5.6 Firewall Blocking Legit Traffic

**Solution**:

1. Check logs
2. Create allow rule
3. Verify application
4. Test without firewall
5. Document exception

### 5.7 Certificate Expired

**Solution**:

1. Renew certificate
2. Distribute to endpoints
3. Verify chain
4. Check applications
5. Update CRL

### 5.8 DLP Alert Triggered

**Solution**:

1. Verify incident
2. Check policies
3. Educate user
4. Adjust rules
5. Document

### 5.9 SIEM Alert Flood

**Solution**:

1. Tune rules
2. Verify sources
3. Adjust thresholds
4. Check for attacks
5. Document changes

### 5.10 Unpatched Vulnerabilities

**Solution**:

1. Prioritize by CVSS
2. Test patches
3. Deploy updates
4. Verify mitigation
5. Document

### 5.11 Brute Force Attempts

**Solution**:

1. Lock account
2. Block IP
3. Enable lockout policy
4. Check logs
5. Enable MFA

### 5.12 Malware Infection

**Solution**:

1. Isolate device
2. Scan with multiple tools
3. Restore from clean backup
4. Reset credentials
5. Patch

### 5.13 Data Leak Suspected

**Solution**:

1. Verify logs
2. Check permissions
3. Disable sharing
4. Enable DLP
5. Investigate

### 5.14 Unencrypted Device

**Solution**:

1. Enable BitLocker
2. Verify TPM
3. Store recovery key
4. Educate user
5. Document

### 5.15 Shadow IT Detected

**Solution**:

1. Inventory services
2. Assess risk
3. Provide approved alternative
4. Block if needed
5. Document

### 5.16 Privilege Escalation

**Solution**:

1. Revoke rights
2. Investigate
3. Reset credentials
4. Check logs
5. Implement PAM

### 5.17 Compliance Violation

**Solution**:

1. Document finding
2. Remediate
3. Update policies
4. Train staff
5. Verify audit

### 5.18 Unsecured API

**Solution**:

1. Enable auth
2. Rate limiting
3. Input validation
4. Monitor
5. Document

### 5.19 Orphaned Account

**Solution**:

1. Disable
2. Document
3. Check for activity
4. Remove permissions
5. Verify

### 5.20 Excessive Permissions

**Solution**:

1. Review access
2. Implement least privilege
3. Document
4. Monitor
5. Train

## 6. Mobile Device Issues

### 6.1 iPhone Won't Sync Email

**Solution**:

1. Re-add account
2. Update iOS
3. Reset sync
4. Check restrictions
5. Verify MDM

### 6.2 Android App Crashing

**Solution**:

1. Clear cache
2. Reinstall
3. Update OS
4. Check permissions
5. Contact developer

### 6.3 Can't Connect to Enterprise WiFi

**Solution**:

1. Verify 802.1X config
2. Check certificates
3. Update profile
4. Forget/rejoin
5. Check RADIUS

### 6.4 Mobile Device Enrollment Failed

**Solution**:

1. Verify compliance
2. Check licenses
3. Reset device
4. Update MDM and Contact vendor

### 6.5 Missing Corporate Apps

**Solution**:

1. Check assignments
2. Reinstall
3. Verify compliance
4. Update MDM
5. Check store

### 6.6 BYOD Access Issues

**Solution**:

1. Verify MAM policies
2. Check conditional access
3. Update apps
4. Reauthenticate
5. Check licenses

### 6.7 Battery Drain

**Solution**:

1. Check apps
2. Update OS
3. Disable features
4. Replace battery
5. Monitor

### 6.8 GPS Not Working

**Solution**:

1. Check permissions
2. Update apps
3. Test outdoors
4. Reset location
5. Verify hardware

### 6.9 Touchscreen Issues

**Solution**:

1. Clean screen
2. Remove case
3. Update OS
4. Test in safe mode
5. Replace

### 6.10 Storage Full

**Solution**:

1. Clear cache
2. Offload apps
3. Backup photos
4. Delete downloads
5. Expand storage

### 6.11 Bluetooth Pairing Failed

**Solution**:

1. Forget device
2. Restart
3. Update OS
4. Check compatibility
5. Reset network

### 6.12 No Mobile Data

**Solution**:

1. Check APN
2. Toggle airplane mode
3. Verify account
4. Update carrier
5. Replace SIM

### 6.13 Overheating

**Solution**:

1. Close apps
2. Remove case
3. Avoid sun
4. Update OS
5. Check battery

### 6.14 Water Damage

**Solution**:

1. Power off
2. Dry completely
3. Rice bag
4. Professional repair
5. Backup data

### 6.15 MDM Policy Conflict

**Solution**:

1. Review policies
2. Check precedence
3. Test changes
4. Document
5. Contact vendor

---

## 7. Cloud Services Issues

### 7.1 OneDrive Sync Issues

**Solution**:

1. Pause/resume sync
2. Check storage
3. Reinstall , Reset and Check logs

### 7.2 SharePoint Access Denied

**Solution**:

1. Verify permissions
2. Check inheritance
3. Grant access
4. Test different browser
5. Check tenant

### 7.3 Teams Meeting Problems

**Solution**:

1. Update client
2. Check bandwidth
3. Reinstall
4. Test web client
5. Verify policies

### 7.4 Azure VM Not Accessible

**Solution**:

1. Check status
2. Verify NSG
3. Reset password
4. Serial console
5. Redeploy

### 7.5 AWS S3 Bucket Issues

**Solution**:

1. Verify permissions
2. Check policies
3. Test CLI
4. Monitor logs
5. Check encryption

### 7.6 Google Workspace Login

**Solution**:

1. Verify SAML
2. Check OAuth
3. Reset password
4. Verify 2SV
5. Check admin

### 7.7 SaaS App Provisioning

**Solution**:

1. Check SCIM
2. Verify attributes
3. Manual provision
4. Check licenses
5. Contact vendor

### 7.8 Cloud Storage Slow

**Solution**:

1. Check bandwidth
2. Test different region
3. Monitor metrics
4. Check config
5. Contact support

### 7.9 Multi-Cloud Connectivity

**Solution**:

1. Verify peering
2. Check firewall
3. Test VPN
4. Monitor latency
5. Optimize routes

### 7.10 Backup Failure

**Solution**:

1. Check storage
2. Verify permissions
3. Test manually
4. Check logs
5. Update agent

### 7.11 Cloud License Missing

**Solution**:

1. Verify assignment
2. Check pool
3. Reassign
4. Contact vendor
5. Document

### 7.12 API Rate Limiting

**Solution**:

1. Check quotas
2. Optimize calls
3. Request increase
4. Cache responses
5. Monitor

### 7.13 Cloud Cost Overrun

**Solution**:

1. Review resources
2. Set alerts
3. Right-size
4. Implement policies
5. Optimize

### 7.14 Container Not Starting

**Solution**:

1. Check logs
2. Verify image
3. Test locally
4. Check resources
5. Update config

### 7.15 Serverless Timeout

**Solution**:

1. Increase timeout
2. Optimize code
3. Check dependencies
4. Monitor
5. Document

### 7.16 CDN Not Caching

**Solution**:

1. Verify headers
2. Check TTL
3. Purge cache
4. Test origin
5. Monitor

### 7.17 Database Connection Issues

**Solution**:

1. Check firewall
2. Verify credentials
3. Monitor connections
4. Check load
5. Optimize

### 7.18 DNS Propagation Delay

**Solution**:

1. Verify records
2. Check TTL
3. Flush cache
4. Contact registrar
5. Wait

### 7.19 Certificate Rotation Failure

**Solution**:

1. Verify permissions
2. Check automation
3. Manual update
4. Monitor
5. Document

### 7.20 Cloud Migration Stuck

**Solution**:

1. Check logs
2. Verify network
3. Pause/resume
4. Contact support
5. Document

---

## 8. Operating System Issues

### 8.1 Windows Update Failed

**Solution**:

1. Run troubleshooter
2. Clear cache
3. Manual update, DISM repair and Reset components

### 8.2 Mac Frozen

**Solution**:

1. Force restart
2. Safe boot
3. Disk Utility
4. Reinstall OS
5. Check logs

### 8.3 Linux Boot Failure

**Solution**:

1. Rescue mode
2. Check fstab
3. Repair GRUB
4. Test disk
5. Reinstall

### 8.4 Task Manager Disabled

**Solution**:

1. Group Policy
2. Registry edit
3. CMD workaround
4. Check for malware
5. System restore

### 8.5 Missing Device Drivers

**Solution**:

1. Windows Update
2. Manufacturer site
3. Device Manager
4. Import driver
5. Check logs

### 8.6 High CPU Usage

**Solution**:

1. Task Manager
2. Update drivers
3. Scan for malware
4. Disable startup
5. Check processes

### 8.7 Disk 100% Usage

**Solution**:

1. Disable Superfetch
2. Check for malware
3. Update drivers
4. Defrag
5. Replace HDD

### 8.8 System Clock Wrong

**Solution**:

1. Sync with NTP
2. Replace CMOS battery
3. Check time zone
4. Group Policy
5. Verify domain

### 8.9 Boot Loop

**Solution**:

1. Safe mode
2. Uninstall updates
3. Check disk
4. Repair boot
5. Reinstall

### 8.10 Missing DLL Files

**Solution**:

1. SFC /scannow
2. Reinstall app
3. Download manually
4. System restore
5. Check logs

### 8.11 Registry Corruption

**Solution**:

1. Backup registry
2. System restore
3. Repair install
4. Check disk
5. Rebuild

### 8.12 Group Policy Not Applying

**Solution**:

1. gpupdate /force
2. Check replication
3. Verify permissions
4. Check inheritance
5. Debug logging

### 8.13 Windows Activation Lost

**Solution**:

1. slmgr /rearm
2. Enter key
3. Contact Microsoft
4. Check BIOS
5. Reinstall

### 8.14 Language Pack Missing

**Solution**:

1. Windows Update
2. Download manually
3. DISM
4. Check region
5. Reinstall

### 8.15 Touchscreen Not Responding

**Solution**:

1. Update drivers
2. Calibrate
3. Check for damage
4. Reboot
5. Replace

### 8.16 Bluetooth Service Stopped

**Solution**:

1. Restart service
2. Update drivers
3. Check hardware
4. Reinstall
5. System restore

### 8.17 Print Spooler Crashes

**Solution**:

1. Restart service
2. Clear queue
3. Update drivers
4. Check for malware
5. Reinstall

### 8.18 Windows Search Broken

**Solution**:

1. Rebuild index
2. Restart service
3. Check disk
4. DISM repair
5. Reinstall

### 8.19 UEFI Boot Issues

**Solution**:

1. Check boot order
2. Secure boot
3. Update BIOS
4. Repair BCD
5. Reinstall

### 8.20 Virtual Machine Not Starting

**Solution**:

1. Check resources
2. Update tools
3. Verify disk
4. Check logs
5. Recreate

### 8.21 Linux Package Broken

**Solution**:

1. apt --fix-broken
2. Manual install
3. Check dependencies
4. Clean cache
5. Reinstall

### 8.22 Mac Keychain Issues

**Solution**:

1. Reset keychain
2. Verify password
3. Restore from backup
4. Check sync
5. Recreate

### 8.23 Windows Feature Missing

**Solution**:

1. DISM add
2. Manual install
3. Check edition
4. Update
5. Reinstall

### 8.24 Linux Permission Denied

**Solution**:

1. chmod
2. chown
3. Check SELinux
4. Verify user
5. ACLs

### 8.25 Mac Printer Not Found

**Solution**:

1. Reset printing
2. Add manually
3. Check drivers
4. Test different
5. Reinstall

**8.26 Windows Stuck in Repair**

**Solution**:

1. Safe mode
2. Command prompt
3. Check disk
4. Rebuild BCD
5. Reinstall

**8.27 Linux Network Down**

**Solution**:

1. ifconfig
2. Check config
3. Restart service
4. Verify drivers
5. Test hardware

**8.28 Mac Startup Chime Issues**

**Solution**:

1. Reset NVRAM
2. Check hardware
3. Update
4. Test speakers
5. Service

**8.29 Windows Sandbox Not Working**

**Solution**:

1. Enable features
2. Check virtualization
3. Update
4. Check Group Policy
5. Reinstall

### 8.30 Linux SSH Connection Refused

**Solution**:

1. Check service
2. Verify firewall
3. Test port
4. Check config
5. Restart

## 9. Additional Issues

### 9.1 Windows Stuck on "Preparing Automatic Repair"

**Solution**:

1. Force shutdown (hold power 10 sec)
2. Boot to recovery (F8/F12)
3. Run Startup Repair
4. Use Command Prompt:
    - bootrec /fixmbr
    - bootrec /fixboot
    - bootrec /rebuildbcd
5. Reinstall Windows if unresolved

### 9.2 MacBook Not Charging

**Solution**:

1. Try different charger/cable
2. Reset SMC (Shift+Control+Option+Power)
3. Check for debris in port
4. Test with battery removed (if possible)
5. Run Apple Diagnostics (D key on boot)

### 9.3 Outlook Search Not Working

**Solution**:

1. Rebuild index (Control Panel → Indexing Options)
2. Disable "Disable hardware graphics acceleration"
3. Run outlook.exe /resetnavpane
4. Create new Windows Search index
5. Repair Office installation

### 9.4 USB-C Port Not Working

**Solution**:

1. Check for physical damage
2. Update chipset drivers
3. Try different cable/device
4. Disable USB selective suspend (Power Options)
5. Test in BIOS (if available)

### 9.5 Windows Hello Face Recognition Failing

**Solution**:

1. Retrain recognition (Settings → Accounts → Sign-in options)
2. Update IR camera drivers
3. Clean camera lens
4. Disable/re-enable Windows Hello
5. Create new user profile

### 9.6 iCloud Syncing Issues

**Solution**:

1. Sign out/in to iCloud
2. Check storage space
3. Disable/re-enable sync for each service
4. Update macOS/iOS
5. Reset iCloud connection (System Preferences → Apple ID → Overview)

### 9.7 Taskbar Icons Missing

**Solution**:

1. Restart Explorer.exe (Task Manager)
2. Run sfc /scannow
3. Re-register taskbar:
    - powershell -command "Get-AppXPackage -AllUsers | Foreach {Add-AppxPackage -DisableDevelopmentMode -Register "$($_.InstallLocation)\AppXManifest.xml"}"
4. Create new user profile
5. Check for corrupted system files

### 9.8 External GPU Not Detected

**Solution**:

1. Verify power supply
2. Update Thunderbolt/USB4 drivers
3. Check BIOS settings (enable external GPU)
4. Test with different enclosure
5. Reinstall graphics drivers

### 9.9 Windows Defender Real-Time Protection Disabled

**Solution**:

1. Check Group Policy (gpedit.msc → Computer Config → Admin Templates → Windows Defender)
2. Run mpcmdrun.exe -wdenable
3. Check for conflicting antivirus
4. Update Windows
5. Repair install

### 9.10 AirDrop Not Working

**Solution**:

1. Enable Bluetooth/WiFi
2. Set visibility to "Everyone"
3. Check firewall settings
4. Reset network settings (iOS: Settings → General → Reset)
5. Update macOS/iOS

### 9.11 Windows Sandbox Not Launching

**Solution**:

1. Enable virtualization in BIOS
2. Turn on Windows Features:
    - "Windows Sandbox"
    - "Virtual Machine Platform"
3. Run DISM /online /enable-feature /featurename:Containers-DisposableClientVM
4. Check Hyper-V requirements
5. Update Windows to latest build

### 9.12 macOS Printer "Paused" Indefinitely

**Solution**:

1. Open Printers & Scanners
2. Right-click printer → Resume Printer
3. Delete/re-add printer
4. Reset printing system:
    - lpstat -p
    - cupsdisable/all
    - cupsenable/all
5. Update printer drivers

### 9.13 Windows 11 Context Menu Too Small

**Solution**:

1. Edit Registry:
    - HKEY_CURRENT_USER\Software\Classes\CLSID\{86ca1aa0-34aa-4e8b-a509-50c905bae2a2}
    - Create new key InprocServer32
    - Set default value to blank
    - Restart Explorer.exe
2. Use Winaero Tweaker
3. Wait for Microsoft update

### 9.14 Linux Dual Boot Time Wrong

**Solution**:

1. Run timedatectl set-local-rtc 1 (to use local time)
2. Alternatively:
    - Windows: reg add HKLM\SYSTEM\CurrentControlSet\Control\TimeZoneInformation /v RealTimeIsUniversal /t REG_DWORD /d 1
    - Linux: hwclock --systohc --localtime
3. Update BIOS time

### 9.15 Xbox Controller Not Connecting to PC

**Solution**:

1. Update firmware (Xbox Accessories app)
2. Forget device in Bluetooth settings
3. Use USB cable for initial pairing
4. Update Xbox controller drivers
5. Disable Steam controller support

### 9.16 macOS "Application Damaged" Error

**Solution**:

1. sudo xattr -rd com.apple.quarantine /Applications/AppName.app
2. sudo spctl --master-disable (disable Gatekeeper temporarily)
3. Check app signature:
    - codesign -dv --verbose=4 /Applications/AppName.app
4. Download from official source
5. Adjust Security & Privacy settings

### 9.17 Windows "Critical Process Died" BSOD

**Solution**:

1. Boot to Safe Mode
2. Run chkdsk /f /r
3. Update drivers (especially storage)
4. Check disk health:
    - wmic diskdrive get status
5. Repair install

### 9.18 Android "Device Not Certified" in Play Store

**Solution**:

1. Clear Play Store cache/data
2. Register device ID:
    - settings get secure android_id
    - Submit to Google
3. Install Play Store manually
4. Flash stock ROM
5. Wait 24-48 hours for auto-certification

### 9.19 Thunderbolt Dock Not Recognizing Monitors

**Solution**:

1. Update dock firmware
2. Try different Thunderbolt cable
3. Check BIOS settings (enable Thunderbolt security)
4. Reinstall display drivers
5. Test with different dock

### 9.20 Windows "Bad Image" Errors

**Solution**:

1. Run sfc /scannow
2. Check Event Viewer for exact DLL
3. Reinstall affected application
4. Update Visual C++ Redistributables
5. Repair .NET Framework

### 9.21 macOS "Your System Has Run Out of Application Memory"

**Solution**:

1. Check Activity Monitor → Memory tab
2. Close memory-hungry apps
3. Increase swap space:
    - sudo launchctl unload -w /System/Library/LaunchDaemons/com.apple.dynamic_pager.plist
    - sudo rm /private/var/vm/swapfile*
    - sudo launchctl load -w /System/Library/LaunchDaemons/com.apple.dynamic_pager.plist
4. Add RAM if possible
5. Reinstall macOS

### 9.22 Linux "No Space Left on Device" (Despite Free Space)

**Solution**:

1. Check inodes: df -i
2. Clear old kernels: sudo apt autoremove --purge
3. Check for deleted files still in use:
    - lsof / | grep deleted
4. Clear package cache:
    - sudo apt clean
5. Resize filesystem if LVM

### 9.23 Windows "Trusted Platform Module" Errors

**Solution**:

1. Clear TPM (BIOS/Windows Security)
2. Update BIOS
3. Reinstall TPM drivers
4. Disable/re-enable in BIOS
5. Reset Windows Hello

### 9.24 macOS "You Don't Have Permission" for External Drive

**Solution**:

1. sudo chmod -R 755 /Volumes/DriveName
2. sudo chown -R $USER /Volumes/DriveName
3. Repair permissions:
    - diskutil resetUserPermissions / (for internal)
    - sudo diskutil repairPermissions /Volumes/DriveName
4. Reformat as APFS/HFS+
5. Check Sharing & Permissions (Get Info)

### 9.25 Windows "Credential Manager" Not Saving Passwords

**Solution**:

1. Run rundll32.exe keymgr.dll,KRShowKeyMgr to manage
2. Rebuild Windows Credential Manager database
3. Check Group Policy:
    - Computer Configuration\Administrative Templates\System\Credential Delegation
4. Run sfc /scannow
5. Create new user profile

### 9.26 Linux "Broken Pipe" Errors

**Solution**:

1. Increase ulimit:
    - ulimit -n 65535
2. Check for network issues
3. Modify systemd services with LimitNOFILE
4. Monitor with dmesg
5. Patch application if bug

### 9.27 macOS "Too Many Open Files"

**Solution**:

1. Check limits: launchctl limit
2. Temporarily increase:
    - ulimit -n 65535
3. Permanently adjust:
    - sudo launchctl limit maxfiles 65535 200000
    - Add to /etc/sysctl.conf:

text

kern.maxfiles=20480

kern.maxfilesperproc=10240

4. Restart affected apps
5. Reboot

**9.28 Windows "Inaccessible Boot Device" BSOD**

**Solution**:

1. Boot to recovery
2. Run Startup Repair
3. Check disk:
    - chkdsk /f /r
4. Rebuild BCD:
    - bootrec /rebuildbcd
5. Roll back drivers (Safe Mode)

**9.29 Linux "APT Hash Sum Mismatch"**

**Solution**:

1. Clear cache: sudo apt clean
2. Update package lists: sudo apt update
3. Delete bad files:
    - sudo rm -rf /var/lib/apt/lists/*
4. Try different mirror
5. Manually download package

**9.30 macOS "Installation Cannot Proceed" (Silicon Macs)**

**Solution**:

1. Boot to Recovery (power + hold)
2. Open Terminal:
    - resetpassword (even if not needed)
3. Close password utility
4. Now Installer works
5. Alternative: Internet Recovery (Option+Cmd+R)

**10. User Can't Remember Password Reset Security Questions**

**Solution**:

1. Verify identity via employee ID/manager confirmation
2. Reset security questions in AD/identity management system
3. Guide user to set new memorable questions
4. Document exception in ticketing system
5. Follow up with security awareness training

---

**11. New Employee's Account Missing Critical Access**

**Solution**:

1. Verify onboarding ticket for required access
2. Check AD group memberships against role template
3. Add to missing security/distribution groups
4. Test access with user
5. Document in knowledge base for future hires

---

**12. Printer "Access Denied" Despite Correct Permissions**

**Solution**:

1. Restart print spooler service
2. Clear stuck print jobs (net stop spooler + delete C:\Windows\System32\spool\PRINTERS*)
3. Re-add printer with admin credentials
4. Check printer share NTFS permissions
5. Verify user has "Print" rights in AD

---

**13. Outlook Auto-Complete Not Showing Recent Contacts**

**Solution**:

1. Navigate to %appdata%\Microsoft\Outlook
2. Backup then delete *.nk2 file
3. Restart Outlook to rebuild cache
4. If persistent, export/import Auto-Complete list
5. Disable third-party add-ins temporarily

---

**14. VPN Disconnects After Exactly 30 Minutes**

**Solution**:

1. Check session timeout in VPN server config
2. Verify idle timeout settings match company policy
3. Add registry key to keep alive:

text

HKEY_LOCAL_MACHINE\SYSTEM\CurrentControlSet\Services\PolicyAgent

"AssumeUDPEncapsulationContextOnSendRule"=dword:00000002

4. Update VPN client software
5. Test with different authentication method

---

**15. "This Site Can't Be Reached" for Internal Web App**

**Solution**:

1. Verify DNS records exist for internal zone
2. Check hosts file for overrides (C:\Windows\System32\drivers\etc\hosts)
3. Test with IP address instead of hostname
4. Flush DNS (ipconfig /flushdns)
5. Verify proxy settings in IE/Chrome

---

**16. Laptop Can't Authenticate to WPA2-Enterprise WiFi**

**Solution**:

1. Delete existing wireless profile:

text

netsh wlan delete profile name="SSID"

2. Reauthenticate with domain credentials
3. Verify computer certificate is valid
4. Check NPS/RADIUS server logs
5. Temporarily test with PSK to isolate issue

---

**17. Excel File Opens as Read-Only Randomly**

**Solution**:

1. Check file properties (hidden "Read-only" attribute)
2. Verify no other users have file open
3. Disable OneDrive/SharePoint auto-save
4. Clear Excel recently used list
5. Test with new user profile

---

**18. Teams Shows "Old" Status for Colleagues**

**Solution**:

1. Clear Teams cache (%appdata%\Microsoft\Teams)
2. Disable GPU acceleration in settings
3. Log out of all sessions via web portal
4. Reinstall Teams using -clean flag
5. Verify no firewall blocking presence updates

---

**19. Keyboard/Mouse Freezes During Remote Session**

**Solution**:

1. Switch from RDP to TeamViewer/QuickAssist
2. Disable "RemoteFX" in RDP settings
3. Update remote desktop client
4. Check for USB redirection policies
5. Test with different input devices

---

**20. User Receiving "Quota Exceeded" for 10MB Emails**

**Solution**:

1. Check Exchange Online mailbox size limits
2. Verify transport rules aren't modifying messages
3. Temporarily increase limit for time-sensitive messages
4. Train user on file sharing alternatives (OneDrive links)
5. Document in knowledge base

---

**21. SAP GUI Crashes Immediately After Login**

**Solution**:

1. Delete saplogon.ini in user's AppData
2. Run SAP GUI in compatibility mode
3. Reinstall SAP GUI using admin rights
4. Verify Java version compatibility
5. Check for corrupted personalization files

---

**22. "File in Use" Error When File Isn't Open**

**Solution**:

1. Check for stale handles (handle.exe or openfiles)
2. Disable opportunistic locking:

text

HKEY_LOCAL_MACHINE\SYSTEM\CurrentControlSet\Services\LanmanWorkstation\Parameters

"UseOpportunisticLocking"=dword:00000000

3. Restart workstation service
4. Verify no backup/AV process is accessing
5. Reboot file server if necessary

---

**23. Dual Monitors Mirror Instead of Extend**

**Solution**:

1. Win+P to cycle projection modes
2. Update graphics drivers (clean install)
3. Check for faulty HDMI/DP cables
4. Reset display settings to default
5. Test with different monitors

---

**24. "Printer Offline" When Physically Online**

**Solution**:

1. Delete and re-add printer
2. Check SNMP status in printer properties
3. Verify TCP port 9100 isn't blocked
4. Update printer firmware
5. Replace with TCP/IP port instead of WSD

---

**25. User Can't Open PST File From Old Computer**

**Solution**:

1. Run SCANPST.EXE to repair
2. Create new Outlook profile

3. Set correct permissions on PST file
4. Import to new PST via Outlook Data File
5. If >50GB, split into multiple PSTs

---

**26. "Trust Relationship Failed" Domain Join Error**

**Solution**:

1. Remove from domain (local admin required)
2. Reset computer account in AD
3. Rejoin to domain
4. Check time synchronization (w32tm /resync)
5. Verify DNS records are correct

---

**27. Excel Freezes When Opening From SharePoint**

**Solution**:

1. Disable "Open in Desktop App" in browser
2. Clear Office credentials via Credential Manager
3. Check for file checkout conflicts
4. Save local copy first
5. Disable COM add-ins

---

**28. "Your IT Admin Has Blocked This App" in Office**

**Solution**:

1. Check Office 365 MDM policies
2. Verify app isn't in blocked list
3. Reset Office activation (ospp.vbs /rearm)
4. Create new Windows user profile
5. Temporary workaround: Use web apps

---

**29. USB Drive Shows 0 Bytes When Formatted**

**Solution**:

1. Diskpart clean:

text

diskpart → list disk → select disk X → clean

2. Reformat as NTFS/exFAT
3. Check for hardware failure (bad sectors)
4. Test with Linux live CD
5. Replace if physical damage

---

**30. "Windows Needs Your Current Credentials" Loop**

**Solution**:

1. Run credwiz to backup/delete saved credentials
2. Clear credential manager
3. Check for GPO pushing incorrect mappings
4. Recreate network share mappings
5. Verify Kerberos ticket renewal

---

**31. Laptop Fan Runs Constantly on Docking Station**

**Solution**:

1. Update BIOS/dock firmware
2. Check power settings (disable "fast startup")
3. Monitor CPU usage (often Teams/Chrome)
4. Clean air vents
5. Replace thermal paste if older than 2 years

---

**32. "Something Went Wrong" During Windows Hello Setup**

**Solution**:

1. Clear TPM (BIOS + Windows Security)
2. Update camera/IR drivers
3. Reset Windows Hello:

text

WindowsHelloForBusinessReset.exe

4. Create new user profile
5. Check for conflicting Group Policies

---

**33. Excel Formulas Show #NAME? After Upgrade**

**Solution**:

1. Verify add-ins are compatible
2. Check for deprecated functions
3. Reinstall Office updates
4. Repair Office installation
5. Migrate to modern functions

---

**34. "The Disk Structure Is Corrupted" on External Drive**

**Solution**:

1. chkdsk X: /f /r
2. Test with different USB port/computer
3. Use data recovery tools
4. Reformat if data is backed up
5. Replace if hardware failure

---

**35. "Windows Could Not Find a Driver" for Unknown Device**

**Solution**:

1. Identify hardware ID in Device Manager
2. Search vendor website using VID/PID
3. Install chipset drivers
4. Check Windows Update for drivers
5. Disable in BIOS if unnecessary

---

**36. "The Specified Domain Either Does Not Exist" During Login**

**Solution**:

1. Verify network connectivity
2. Check DNS settings (nslookup domain.com)
3. Test with cached credentials
4. Restart Netlogon service
5. Rejoin to domain if persistent

---

**37. "Your Connection Is Not Private" on Internal Sites**

**Solution**:

1. Install root CA certificate
2. Verify certificate chain
3. Add exception in browser
4. Check system date/time
5. Disable SSL inspection temporarily

---

**38. "The Feature You Are Trying to Use Is on a Network Resource"**

**Solution**:

1. Mount original installation source
2. Clear Office installer cache
3. Repair via Control Panel
4. Reinstall Office completely
5. Check software restriction policies

---

**39. "The Requested Resource Is in Use" During Uninstall**

**Solution**:

1. Use Process Explorer to find handles
2. Reboot in safe mode
3. Use MSI cleanup tool
4. Manual registry cleanup
5. Reinstall then uninstall
